Possible Conditions & Recommendations

- Treatment:

- Consultation with an appropriate specialist (e.g., oncologist, endocrinologist)
- Addressing the underlying medical condition and potential medication adjustments

**\*\*General Medication Suggestions:\*\***

- For all conditions, maintain proper hydration by drinking water or other non-caffeinated, non-sugary beverages.
- Pain relievers like acetaminophen or NSAIDs (with caution and consultation) may be considered for symptomatic relief.
- Over-the-counter fever reducers (containing acetaminophen or ibuprofen) can be used, but always consult a doctor before starting any new medication.
- Antibiotics should only be prescribed by a healthcare professional for bacterial infections; misuse can lead to antibiotic resistance.
